

# Phil Beck

The Banks Project Executive

Public Partnership

In Phase 2 of the project, Beck is continuing The Banks' vision begun in the first phase including the intermodal parking garage design and construction between Rosa Parks Street and Elm Street (east-west), and between Second Street and Mehring Way (north-south). He views The Banks as the most important Economic Development project at the Downtown Cincinnati riverfront and its completion will play a large part in the continued attraction and growth of the Cincinnati region.

## Relevant Experience

During his 27 years in construction and program management, Phil Beck has worked on a variety of large scale infrastructure projects including Great American Ball Park, Government Square, Phase 1 of The Banks and the Smale Riverfront Park Carousel Building. His 14 years as an officer in the Navy Civil Engineering Corps have taught him that good preparation requires accurate intelligence reports, advanced planning, quality training and determined implementation—all of which he uses in his position with The Banks.
